Description

The KA319 is a dual high speed voltage comparator designed to operate from a single +5V supply up to $\pm 15V$ dual supplies. Open collector of the output stage makes the KA319 compatible with RTL, DTL and TTL as well as capable of driving lamps and relays at currents up to 25mA. Typical response time of 80ns with $\pm 15V$ power supplies makes the KA319 ideal for application in fast A/D converts, level shifters, oscillators, and multivibrators.

Notes :

1. The offset voltage and offset currents given are the maximum values required to drive the output within a volt of either supply with a 1mA load. Thus, these parameters define an error band and take into account the worst case effects of voltage gain and input impedance.
2. The response time specified is for a 100mV input step with 5mV overdrive.
3. KA319 : $0 \leq T_A \leq +70^{\circ}C$
